

MEMO

Status of the project: Completed fulfilling all the functionalities.

- (i) The number of hours you needed to get the code working
I have worked on daily basis for the development of code. I started with understanding the project and continued with the coding part. I also had to do lot of research about .ics files .So development phase took me around 3 weeks.
- (ii) The number of hours you spent preparing your submission.
Two hours for documentation and checking the pattern of documents and folders as specified in varia section of the course syllabus page.
- (iii) Encountered problems with the project :
I had faced few challenges with the development of code. I had no proper idea about the .ics files. I had to do a little research on it and its import and export techniques. I had to learn how data can be stored simultaneously in both XML and .ics files and how data can be deleted from both simultaneously. I faced certain issues with my GitHub account too in uploading my project but I could figure out its solutions easily and update my code quickly.
